Table of Contents

BASIC INFORMATION

Field	Details
Full Name	Vietnam Technological and Commercial Joint Stock Bank
Exchange / Ticker	HOSE — TCB
Sector	Banking & Financial Services
Shares Outstanding	7.086 million shares
Market Capitalization	223 trillion VND
Float	55%
Beta	1.03
Credit Rating	BB (S&P Global Ratings)

HIGHLIGHT

We initiate a **Buy** recommendation on TCB with a target price of VND **43.186 per share** based on **DCF** (FCFE), **P/E** and **P/B** valuation models. This target price represents a **27% upside** to the current market price of around VND **34,000** as of May 1st, 2026.

NIM has stabilized driven by industry-leading CASA

Following a decline driven by elevated funding costs during the monetary tightening, Techcombank's NIM has entered a **stabilization** phase in the 3.9–4.2% range. The Bank's industry-leading CASA ratio provides a structurally **low** and **stable** cost of funds, establishing a **solid** NIM floor.

Regulatory tailwinds support diversification strategy

As regulators **tighten** capital flow controls into **high-risk** sectors and **prioritize** credit for **production** and **business**, Techcombank's ongoing diversification toward **consumer** lending and **SMEs** places the Bank in direct **alignment** with policy direction. While captures demand in favored segments, supporting a more **resilient** earnings base ahead.

Technical setup corroborates the fundamental thesis, confirming BUY

Price trades above MA5–MA100 with EMA200 maintaining a **buy signal**, confirming the **uptrend** remains intact. Pivot at 34,200 VND is key, a breakout opens 34,500–35,100, while 33,000-33,500 range holds as support. Pullbacks toward MA clusters represent low-risk **accumulation** opportunities.

BUSINESS DESCRIPTION

Products and services

Retail Banking Group (RBG) serves **individual** customers and **SMEs** across four tiers (Inspire, Priority, Private, Business).

5,9% credit growth (YTD)

Corporate & Investment Banking Group (CIBG) serves **large corporations** across six priority sectors: real estate, FMCG, utilities, financial services, automotive, and travel and leisure.

458,2 trillion corporate credit

Techcom Securities (TCBS) is TCB's primary non-lending **fee income** engine, offering **brokerage**, **margin lending,** and **bond underwriting**.

#1 in corporate bond issuance advisory

#Top 3 on HOSE

Techcom Life (TCLife) & Techcom Non-Life (TCGIns) provide life and non-life **insurance** through TCB's ecosystem.

#1 in bancassurance by APE

Techcom Capital manages domestic **open-ended funds** and **wealth** advisory.

#1 in wealth management with Private & Priority AUM

Tech AMC handles **debt recovery** and **asset liquidation** for TCB.

26.7 trillion in outstanding principal

Business model

Diversified revenue streams

TCB generates fee income across **multiple product lines**: **investment** banking and **bond** underwriting via TCBS; **insurance** premiums through TCLife and TCGIns; and **debt recoveries** via TechAMC.

One-stop-shop ecosystem

TCB's competitive moat is reinforced by a comprehensive **financial ecosystem** covering the entire customer value chain. Through TCBS (digital investment and bond brokerage), Techcom Capital (fund management), TechAMC (asset recovery), and TCLife (insurance), TCB is transitioning from a traditional lending model to a fee-based franchise. This integrated ecosystem creates significant switching costs and establishes a platform that is difficult for competitors to replicate.

TCB's position

Market leadership in the affluent segment

TCB is Vietnam's **most valuable private banking** brand, valued at nearly USD **1.7 billion**, managing over VND **428 trillion in AUM** and commanding more than **50% market share** in the **affluent** segment.

Digital infrastructure and data ecosystem

As the **first** Vietnamese bank to migrate core infrastructure to the **cloud** via a strategic partnership with AWS, TCB has built a significant technological moat. Deep **ecosystem integration** with Masan Group (WinMart, Phuc Long) and Vingroup has enabled the bank to acquire 1 million new retail customers through strategic partnerships.

Leading position

TCB ended 2025 with total assets of VND 1.19 quadrillion, positioning among Vietnam's **top 6** banks. The bank holds the **#1 ROA** position at 2.39% and leads the entire industry with a **CASA ratio** of 40.4%.

SWOT

S

CASA Leadership: CASA ratio consistently above 40% creates a structural advantage in NIM expansion.

Ecosystem-Centric Model: Deep integration with Vietnam's leading conglomerates enables high-quality corporate relationships.

Digital-First Operations: Heavy investment in cloud computing, big data, and eKYC reduces customer acquisition and servicing costs.

W

Concentration Risk: Deep ties to a number of anchor conglomerates expose TCB to idiosyncratic risk.

Real Estate Exposure: A significant portion of the loan book tied to the property sector leaves the bank vulnerable to prolonged real estate market downturns.

O

AI-Led Operations: The "Data Brain" platform allows leverage data at scale and reduce credit risk.

Beyond Banking Expansion: Expansion into insurance, wealth management, and cross-border payments diversifies revenue and improves quality of earnings.

Capital Markets Growth: The approvement of 60% bonus share issuance and ESOP in 2026 makes TCB become the largest private bank by charter capital.

T

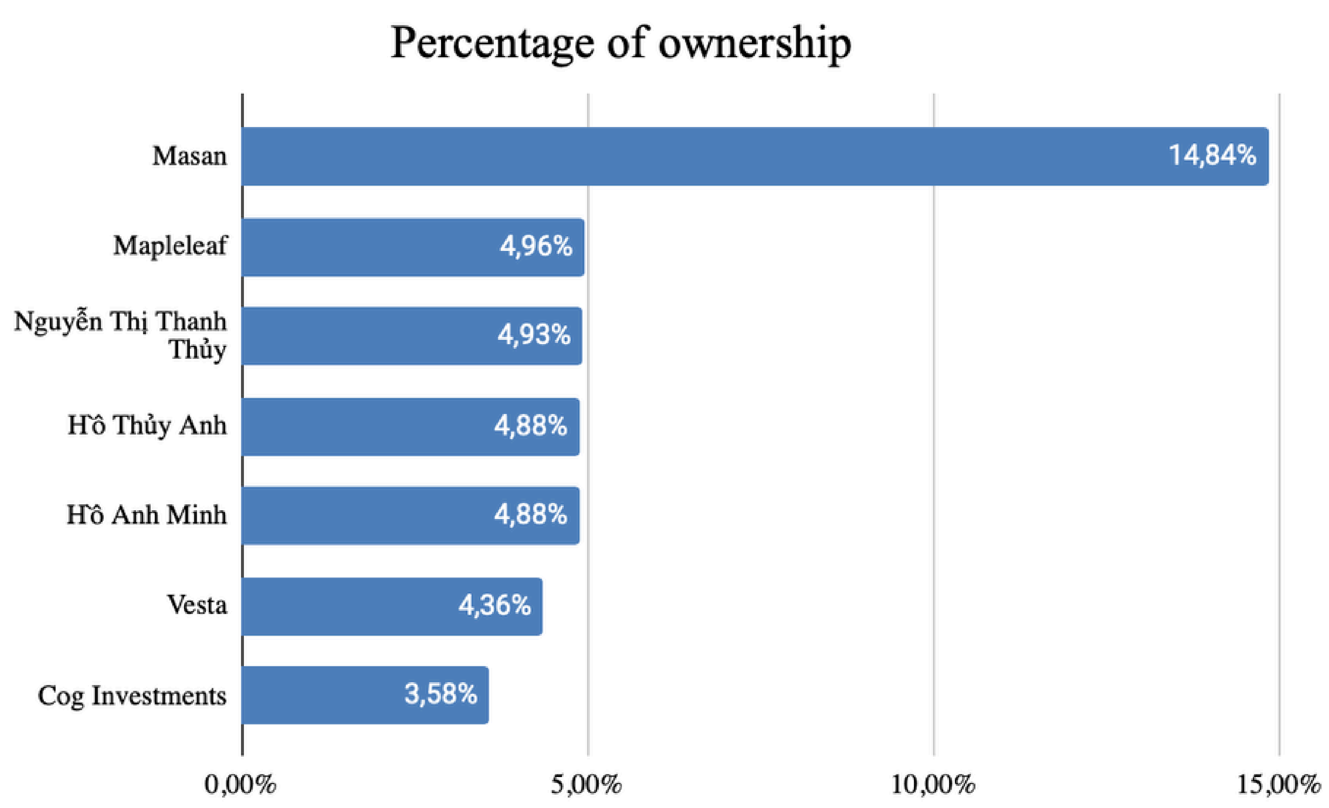
Digital Banking Competition: Fintech players (Zalopay, MoMo) competes with superior UX and zero-fee propositions.

Regulatory Tightening: Stricter SBV regulations on real estate lending caps, credit growth quotas, and capital adequacy requirements.

GOVERNANCE

Shareholder structure

TCB's ownership is anchored by its **founding family** and **strategic investors**. Chairman Ho Hung Anh's family and Masan Group, reflecting a tightly **concentrated** control structure. On the foreign side, COG Investment and Vesta are long-standing strategic investors. TCB's Board comprises **nine members** for the 2024–2029 term, including **two independent directors** (~22%), meeting Vietnamese regulatory minimums. The management team is led by CEO Mr. Jens Lottner, supported by **international executives**, underscoring TCB's commitment to global best practices.



ESG

E - Environment

Techcombank has pioneered a **Green Bond Framework** rated "Medium Green" by S&P Global Ratings, leading to the successful issuance of VND 450 billion in green bonds. The bank has also digitalized processes and utilized smart Building Management Systems (BMS) to save up to 15% in energy.

S - Social

TCB identifies "**Empowering People**" as a core mission. Key initiatives include sponsorship of prestigious international marathons in Hanoi and Ho Chi Minh City, promoting the "**Be Greater**" spirit, alongside investment in future generations through the "Build a Foundation for Talent" program and various educational sponsorships.

G - Governance

The bank ensures objectivity with **100% non-executive Board members** and integrates environmental and social risks into its credit appraisal process, helping TCB maintain its position in the **VNCG50** index for best corporate governance practices.

INDUSTRY OVERVIEW & COMPETITIVE POSITION

Macro overview

Global economy

The 2026 global backdrop is defined by **geopolitical fragmentation**, persistent **inflation**, and an **IMF** growth forecast of just 3.1% - with recession risks amplified by high oil prices and AI-driven labor displacement. Amid this slowdown, investors should rotate toward **high-quality stocks** with resilient earnings to mitigate macro headwinds.

Vietnam

The anticipated EM **reclassification** unlocks $25 billion in foreign inflows and heavy **fiscal-led** public investment sustaining domestic momentum. **Infrastructure** buildout and structural reforms further reinforce the long-term growth thesis. In this environment of heightened volatility, investors should focus on **high quality stocks** with discipline.

Banking sector overview

Industry potentials

Market Upgrade and Institutional Inflow

FTSE Russell's upgrade of Vietnam to secondary emerging market status is expected to deepen institutional participation, directing foreign capital inflows from global ETFs into domestic equities.

Substantial credit growth

Total system credit reached VND 19.18 quadrillion as of March 2026. With the SBV maintaining accommodative lending rates, significant **credit room** remains for the rest of 2026.

Boom in digital payments

Non-cash payment volumes surged 40.7% in 2026 and **interbank online** transactions hitting a record drive sustainable CASA expansion as **digital apps** become the primary hub for daily consumer spending.

Government support

SBV's policy to **limit the "goldization"** of the economy and the deployment of VND 80 trillion in government bonds into **public investment** projects creates a multiplier effect, stimulating long-term credit demand across the infrastructure and manufacturing sectors.

5 Forces

Competitive Rivalry Among Existing Competitors: HIGH

4 SOCBs and 30+ JSCBs competing for deposits and lending relationships.
High **similarity** in core banking apps and financial products forces aggressive competition in "Beyond Banking" ecosystems.
Leading private banks (TCB, MBB, VPB) leveraging **digital ecosystems** and **CASA** strategies to secure customer stickiness.

Threat of Substitutes: MODERATE

Alternative corporate **funding channels** (corporate bonds, equity markets) are still under development.
Mobile payment platforms (MoMo, ZaloPay), P2P lending compete for savings and credit wallet.

Bargaining Power of Suppliers: MODERATE

Retail depositors hold **weak power** due to strict SBV deposit rates cap and monetary easing.
Institutional and **foreign lenders** demand **strict compliance** with international standards (Basel III) before allocating capital.

Threat of New Entrants: LOW

Stringent SBV licensing, substantial minimum charter capital, ongoing Basel III compliance costs.
Credit Quota historically suppressed attractiveness of new entry.
Fintech and **digital lending platforms** represent emerging threat at the margins.

Bargaining Power of Buyers: LOW - MODERATE

Retail borrowers hold **weak power** due to product standardization.
Large corporates hold **moderate power** driven by massive financing scale and aggressive banking competition.
eKYC, digital platforms, and **zero-fee transfers** allow seamless capital movement for retail clients.

Value chain

Liability origination	Credit intermediation	Fee-based services	Capital markets	Digital delivery
mobilizing deposits from retail customers, corporates, and interbank sources.	deploying capital into loans across retail, SME, and corporate segments.	wealth management, bancassurance, FX, and payment processing.	bond underwriting, securities brokerage, and advisory.	mobile and internet banking platforms that reduce cost and deepen customer relationships.

Supply and demand

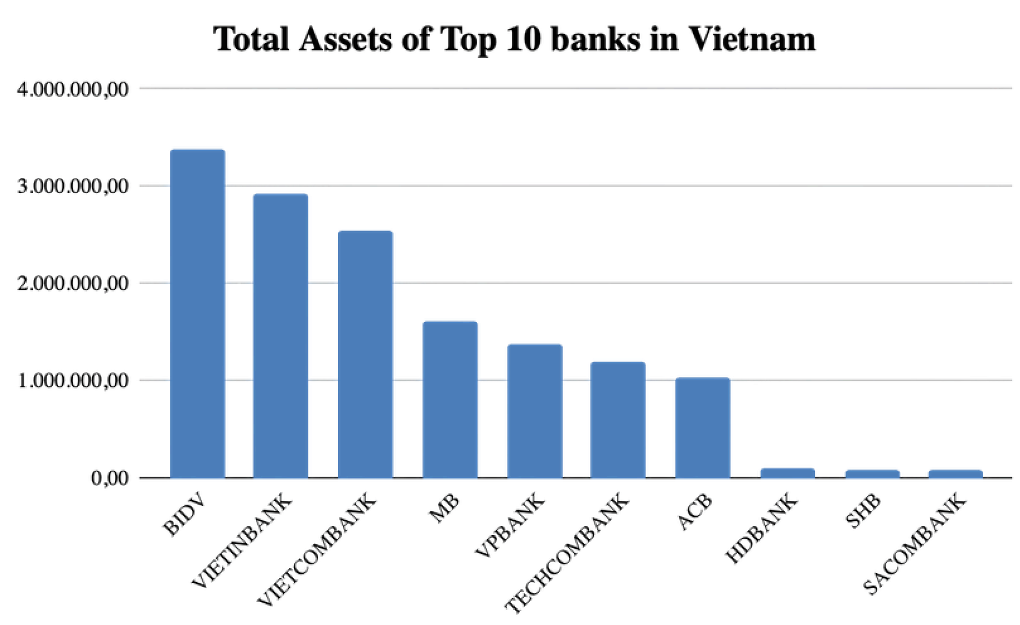
S - Supply

Taking **deposits** remain the primary and most stable funding source across the sector. In 2025, system **credit growth** of nearly 18% **outpaced** deposit growth of approximately 14%, creating tightening **liquidity pressure** and **intense competition** among banks.

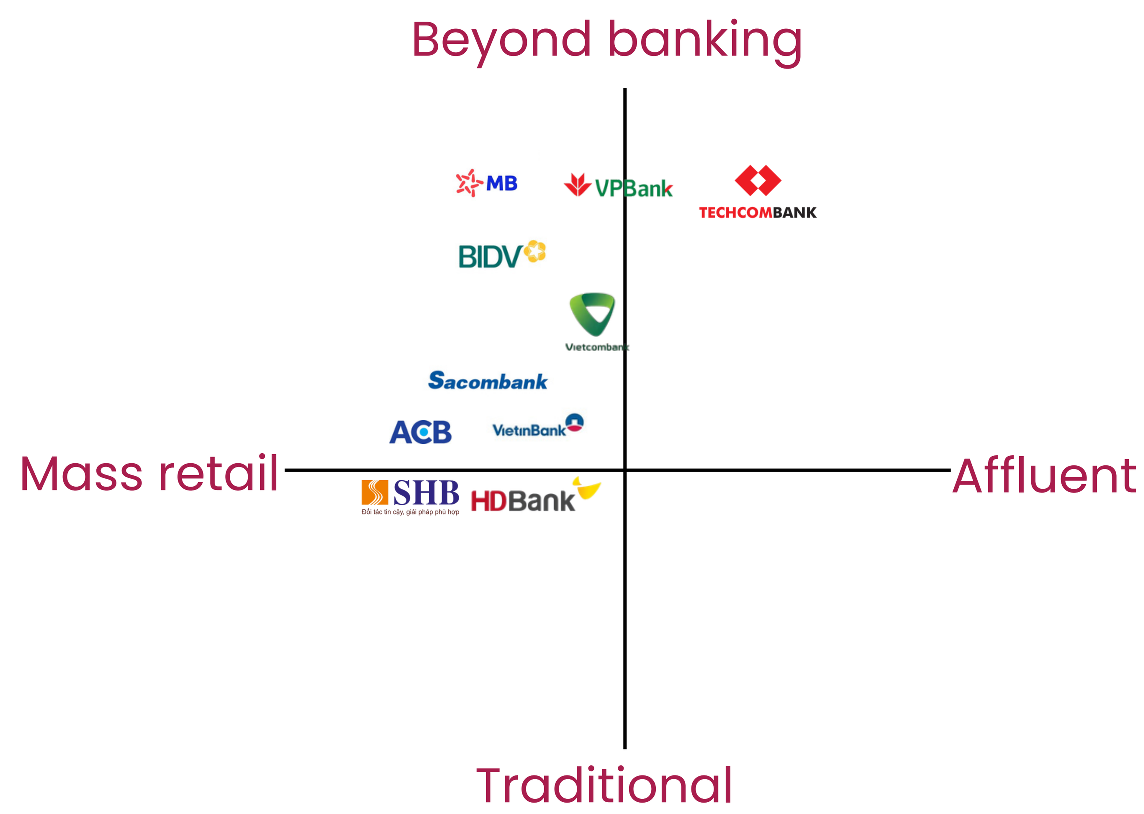
D - Demand

Demand for the sector is driven by **credit**. In 2026, SBV has set a **credit growth target of 15%**, reflecting a more cautious approach. The SBV requires credit institutions to strictly control capital flows into sectors with potential risks, especially real estate, while prioritizing credit for production and business.

Market share

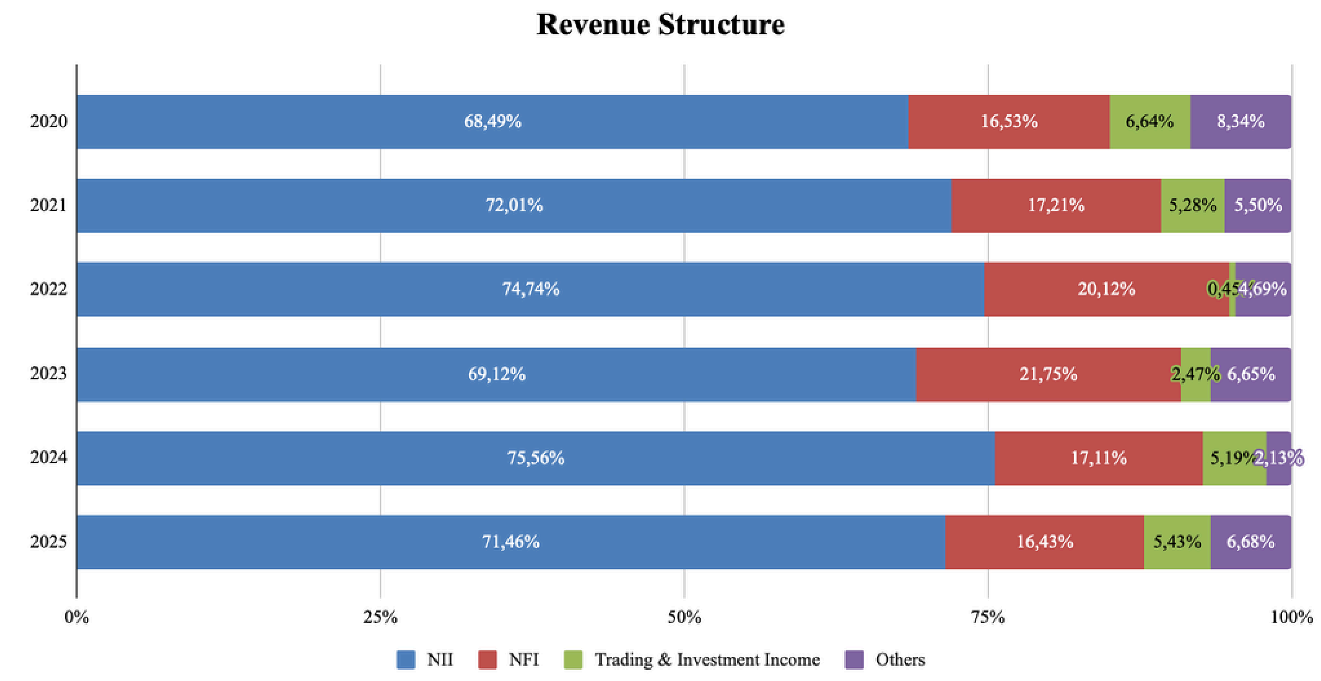


The three state-owned banks (BIDV, Vietinbank and Vietcombank) dominate with a significant size advantage over their private peers. TCB **ranks 6th** overall, but stands as one of the leading private banks in terms of scale.



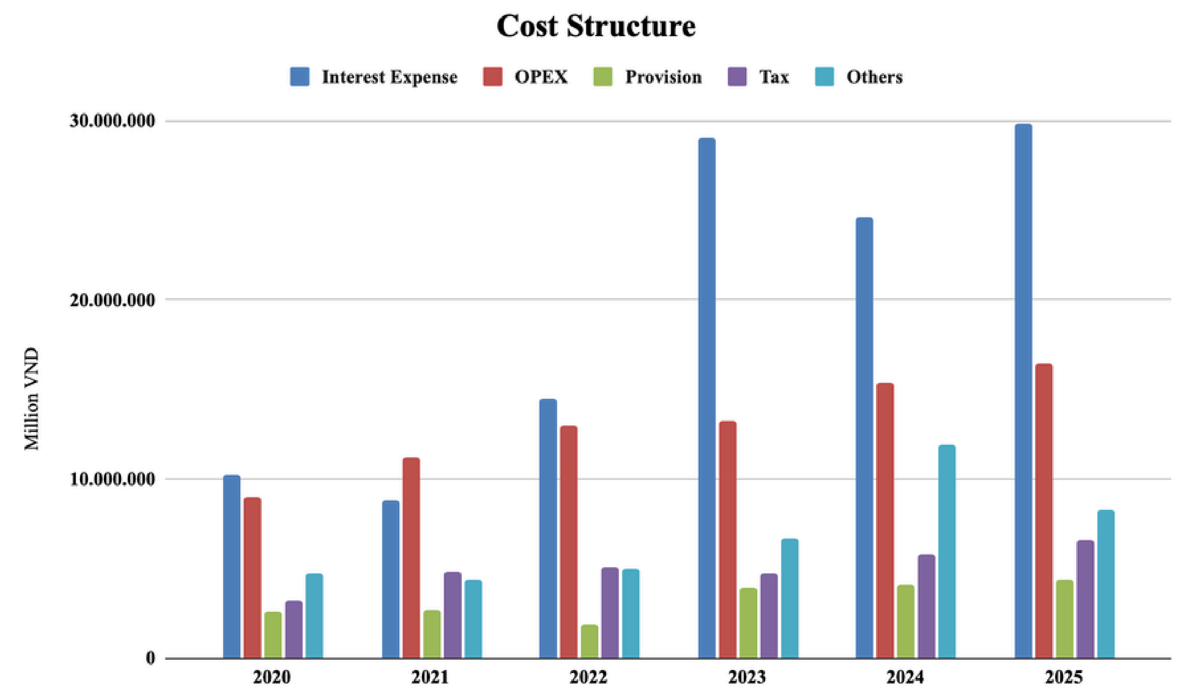
FINANCIAL ANALYSIS

Revenue structure



NII remains the **dominant** revenue driver, underpinned by TCB's industry-leading CASA of 40.4% which provides a structural cost-of-funds advantage.
NFI serves as the **second pillar**, driven by bond distribution, card operations, bancassurance, and wealth management.
Investment income and others contribute a smaller, more volatile share.

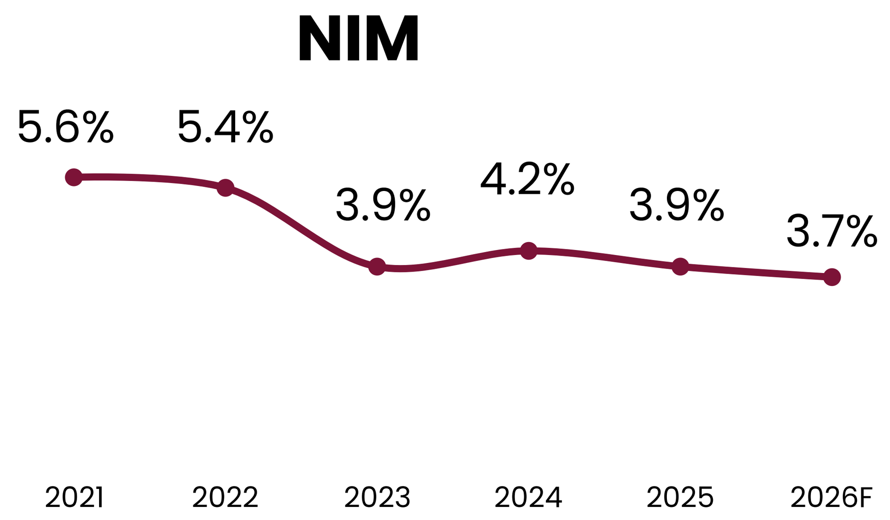
Cost structure

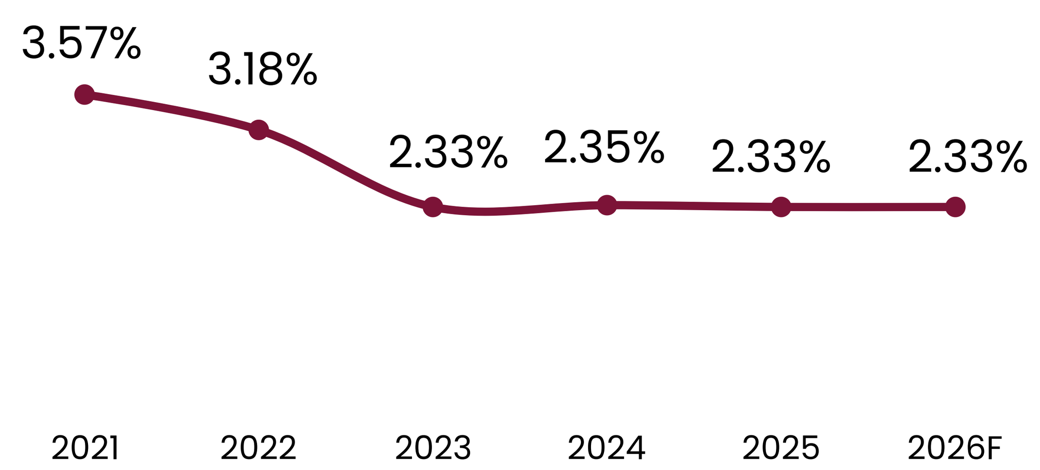


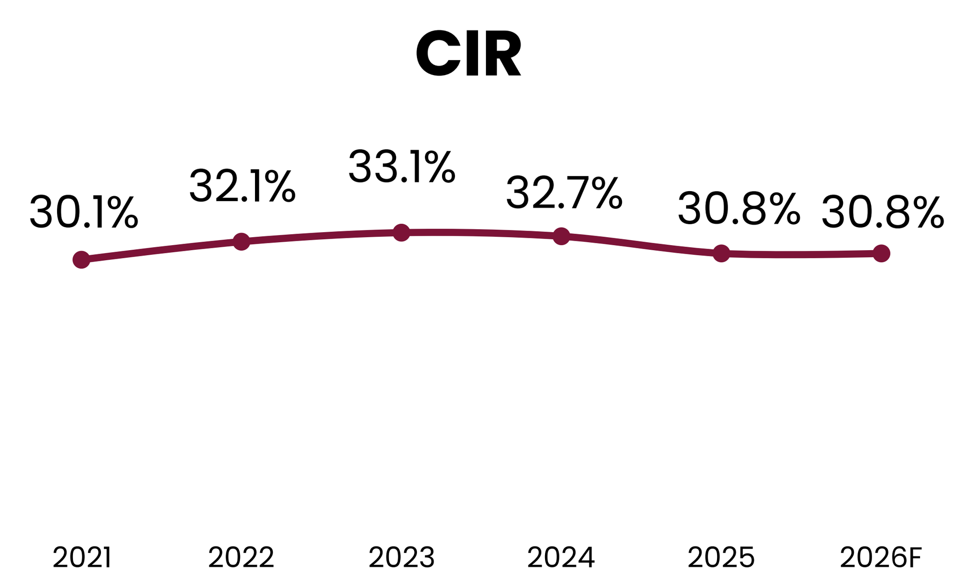
Interest expense remains the **largest** cost outflow, reinforcing TCB CASA strategy priority.
OPEX is the **second** major cost component, reflecting TCB's sustained investment in cloud, big data, and digital infrastructure to reduce customer acquisition and servicing costs.
Provision expense remains **well-controlled**, reflecting disciplined credit risk management.

Ratios

Profitability





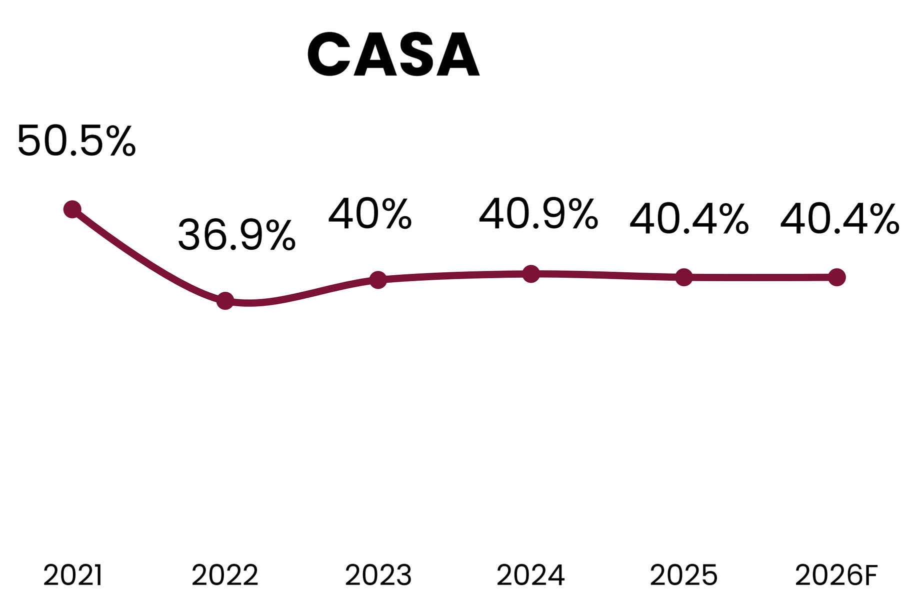


Downward over the years reflects trade-off to boost credit growth by offering preferential lending rates.

ROA **declined** sharply in 2022–2023 as **corporate bond crisis** and **high-profile arrests** hit TCB harder given its outsized **real estate exposure**. Recovery through 2024–2025 reflects active portfolio **restructuring** toward **consumer** lending and **SMEs**.

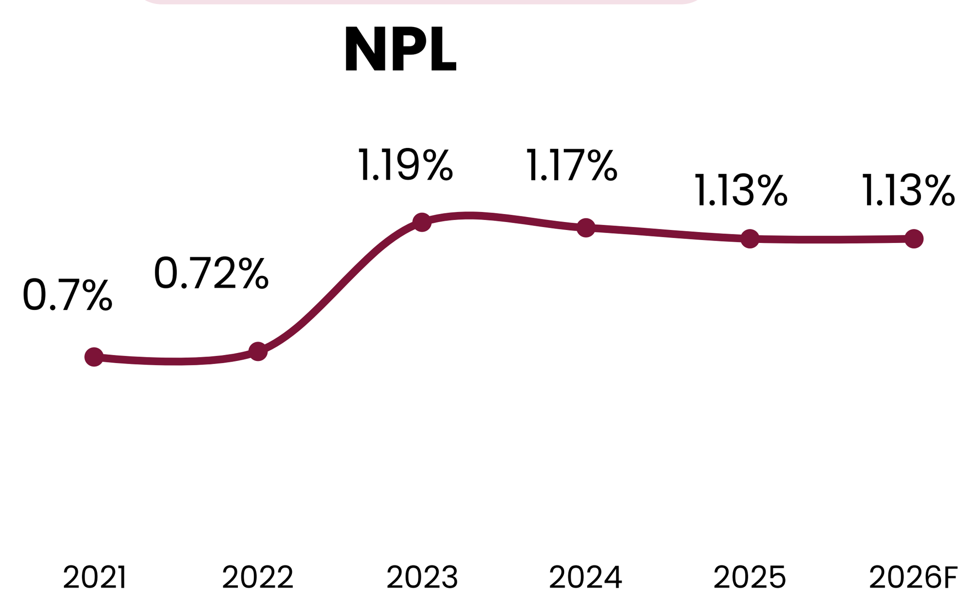
This outstanding discipline refleccts bank's long-term investment in **digital-first operations**, which successfully migrated transactions onto digital platforms and decoupled business scaling from physical branch costs.

Liquidity & Funding



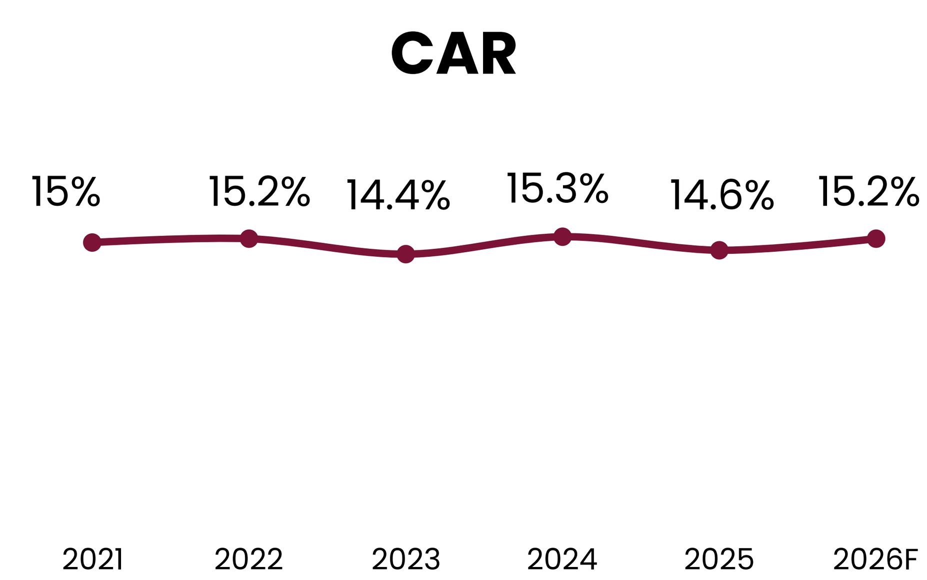
CASA **declined** sharply in 2022–2023, as aggressive **monetary tightening** and the **corporate bond crisis**. From 2023 onward, CASA stabilized and recovered, supported by TCB's digital banking expansion.

Asset quality



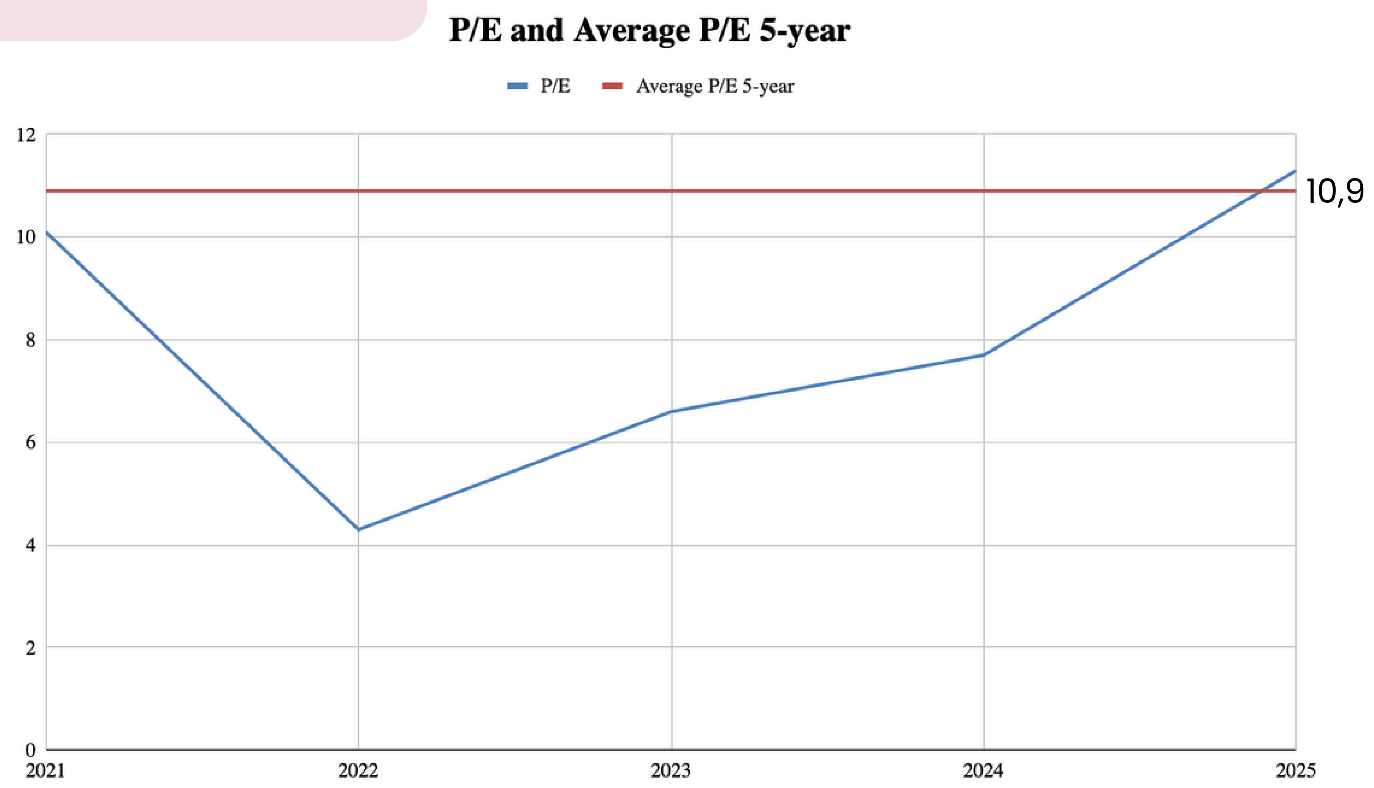
NPL remains among the **sector's lowest**, though a **2023 spike** reflected the **property market freeze** following the Van Thinh Phat collapse and corporate bond defaults. NPL then declined due to loan portfolio restructuring.

Capital quality

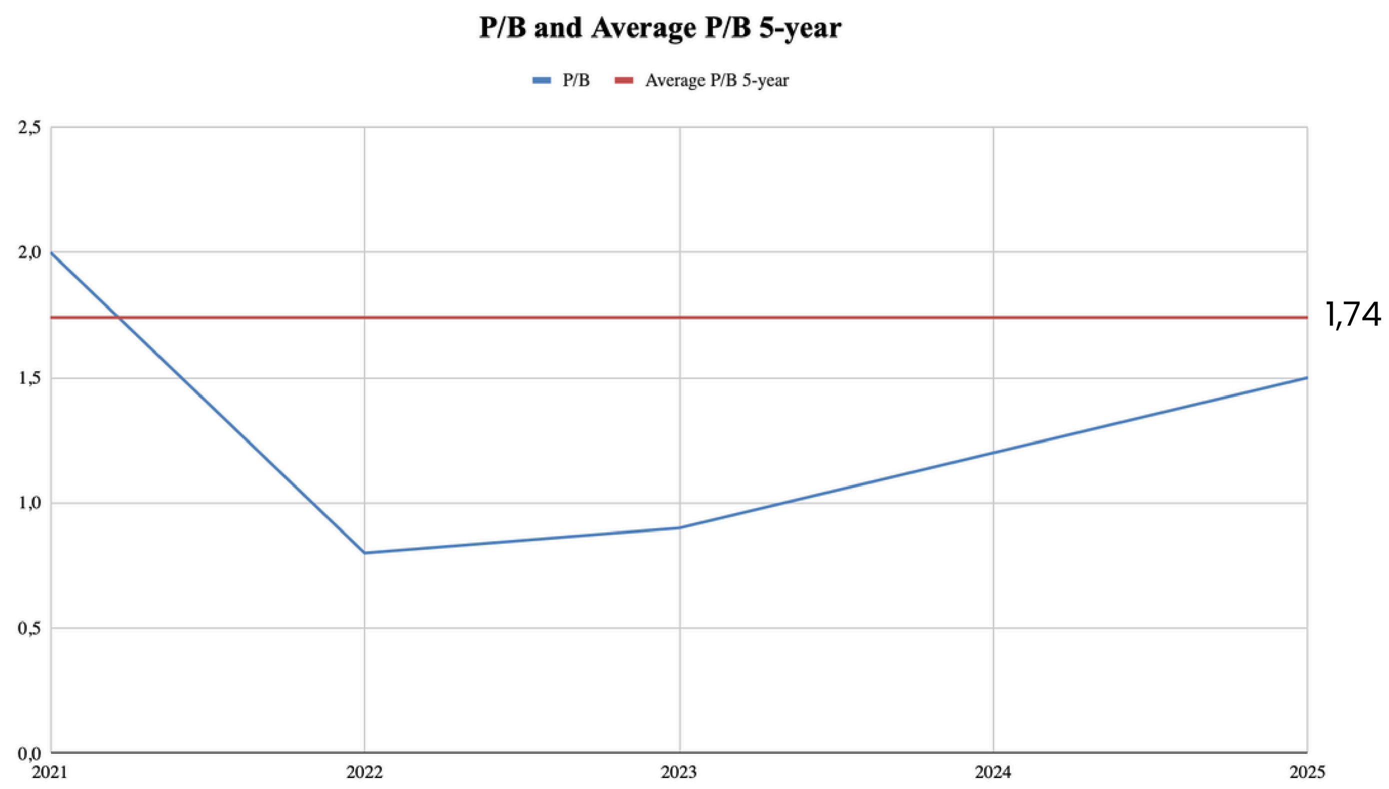


CAR has been **stable** throughout 2021-2025, consistently holding in the 14-15% range, well above the regulatory minimum of 8% under Basel II.

Valuation



P/E crashed **below** the sector average in 2022 as the **corporate bond crisis** and **real estate freeze** triggered aggressive repricing of its outsized property exposure. From 2023, the ratio steadily recovered alongside earnings stabilization and returning investor confidence, ultimately **back to the sector** average by 2025.



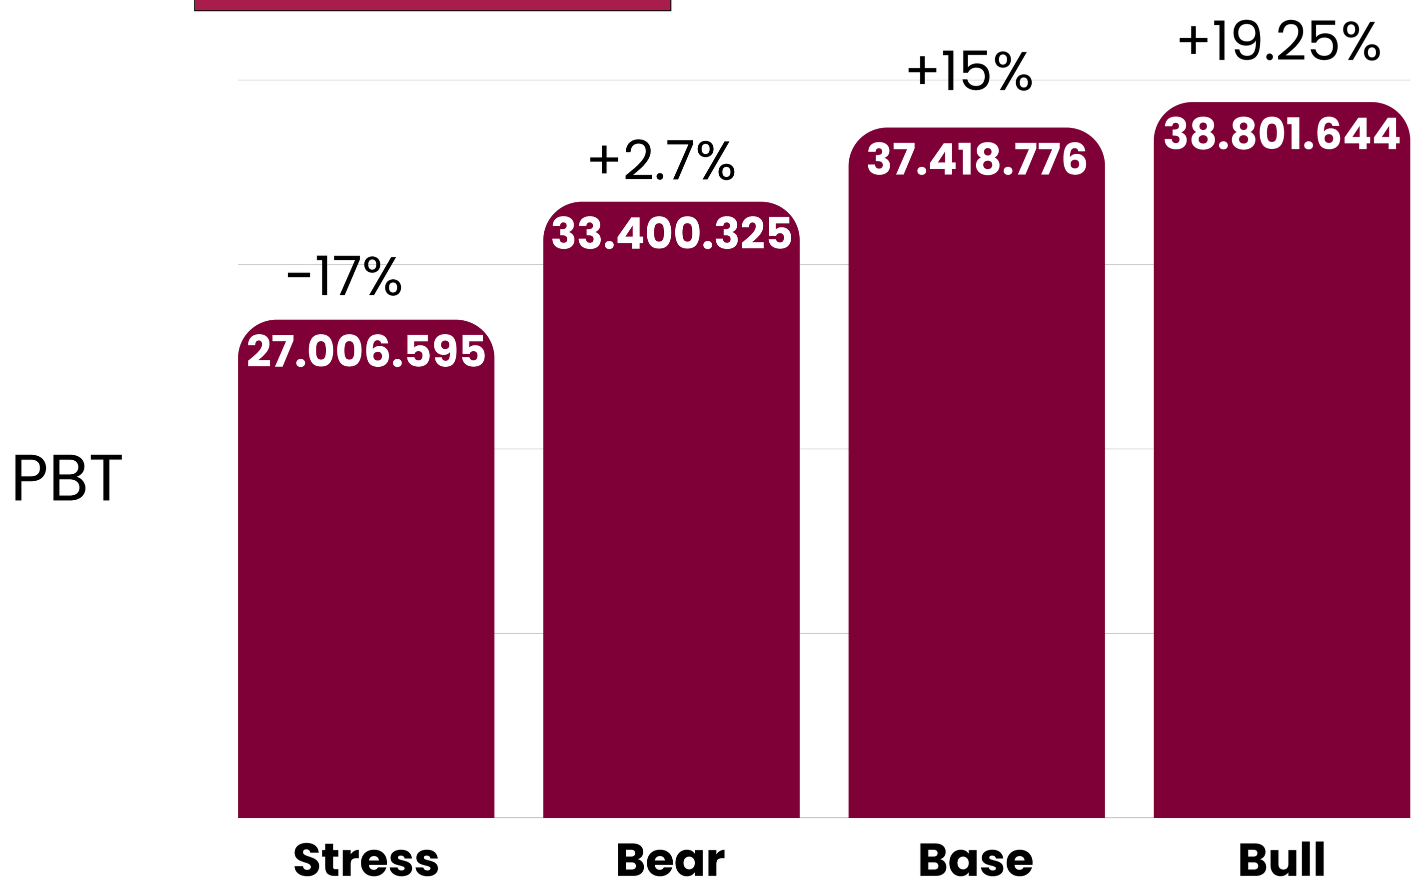
P/B followed the same but recovery remains incomplete. This **discount** suggests investors remain **cautious** about TCB's **asset quality** (its real estate exposure) and are awaiting for **portfolio diversification** before fully re-rating the stock to sector levels.

VALUATION

Method comparison

- **P/E Multiple (Selected):** P/E assesses Techcombank's **earnings power**.
- **P/B Multiple (Selected): Book value** carries direct regulatory significance under Basel III **capital adequacy** requirements.
- **DCF – FCFE (Selected):** By discounting residual cash flows, FCFE precisely captures Techcombank's intrinsic long-term value. Driven by an industry-leading CASA ratio, the bank secures a structurally predictable cost of funds.

Forecast



We project TCB's PBT for 2026E across **four scenarios**. Our base case growth rate of **15%** is anchored to TCB's estimate for **pre-tax profit** growth in 2026. The other cases will be also based on that growth rate combined with **GDP** growth, **interest rates**, **CPI**, **depreciation** rate and **FDI**. These coefficients reflect the degree to which each macro variable impacts TCB's earnings.

P/E Multiple

Stress	Bear	Base	Bull
4.3x	6.6x	8,9x	11.3x

P/B Multiple

Stress	Bear	Base	Bull
0.8x	1.0x	1.4x	2.0x

Scenario multiples for both P/E and P/B are anchored to TCB's **5-year historical** range. Stress and Bear cases reflect trough and near-trough multiples during the 2022–2023 downturn. The Base case uses LTM multiples. The Bull case refers the 5-year historical peak multiple, representing the upper bound of TCB's observed valuation range.

Results

P/E	2026E Stress	2026E Bear	2026E Base	2026E Bull
Probability	5%	20%	50%	25%
EPS	3.049	3.771	4.225	4.381
Target P/E	4,3	6,6	8,9	11,3
Target price	13.111	24.888	37.598	49.501
P/E Valuation				**36.808**

We value TCB using a scenario-based P/E approach across four 2026E earnings scenarios, yielding a target price of **36,808** — a **8% upside** to the current price of 34,000. With 75% of probability mass pointing to targets above 37,000, the risk/reward remains asymmetrically favorable. We initiate with a **BUY** recommendation.

P/B	2026E Stress	2026E Bear	2026E Base	2026E Bull
Probability	5%	20%	50%	25%
BVPS	26.346	27.068	27.522	27.678
Target P/B	0,8	1	1,4	2
Target price	21.077	27.068	38.531	55.356
P/B Valuation				**39.572**

Book value per share (BVPS) is estimated using 2025 closing equity, projected 2026E base case net income, and estimated dividends paid in 2026. Target price of is **39.572**, which closely **corroborates** the **P/E derived** price. This dual method convergence strengthens our **BUY** recommendation.

DCF	2026E	2027E	2028E	2029E	2030E	2031E
FCFE	42.407.915	45.800.548	49.464.592	51.937.822	54.534.713	55.625.407
Ke	15,85%	15,85%	15,85%	15,85%	15,85%	15,85%
g	8,00%	8,00%	8,00%	5,00%	5,00%	2,00%
DCF Valuation						**53.180**

We apply FCFE-based DCF model with key assumptions: a hot growth rate of 8% anchored to NFI expansion , 5% accounts for a gradual deceleration as intense peer competition, 2% reflects long-term steady stage and a cost of equity of 15.85% derived via **CAPM**.

The gap between the DCF and two methods is because DCF captures intrinsic value on a cash flow basis, whereas P/E and P/B are anchored to historical market multiples. However, all three methodologies consistent, reinforcing the BUY thesis.

Sensitivity analysis

53.180	14,85%	15,35%	15,85%	16,35%	16,85%
1,00%	52.626	51.691	50.778	49.887	49.018
1,50%	53.837	52.875	51.937	51.021	50.128
2,00%	55.135	54.145	**53.180**	52.237	51.318
2,50%	56.530	55.510	54.516	53.545	52.598
3,00%	58.034	56.982	55.956	54.954	53.977

The target price proves **resilient** across scenarios, ranging from VND 49,018 (most conservative case) to VND 58.034 (most optimistic case).

For the DCF to **compress** to the **current price** of VND 34,000, the discount rate would need to surge to **29%** - beyond any realistic banking sector threshold in Vietnam. We reinforce with a high-conviction BUY.

Equally weighted method

33,3%P/E + 33,3%P/B + 33,3%DCF ~ 43,186 VND

At date May 1st 2026, the closed price is around 34,000 VND. That means the current price is lower than its intrinsic value around 27%. TCB is a **potential stock** in the future with its target price at 43,186 VND. At current levels, TCB appears meaningfully **undervalued** relative to its intrinsic worth. We reinforce a **Buy** recommendation.

TECHNICAL ANALYSIS

Oscillator

Strong Buy Signal: Major trend-following and momentum indicators (MACD, ADX, and ROC) point to a **strong upward** continuation.

Overbought Nuance: STOCH and Williams %R have entered **overbought** territory, suggesting potential **short-term consolidation**.

Dominant Bullish Control: Despite minor profit-taking pressure, the broader **buying momentum** continues to firmly **control** the market direction.

Moving average

Bullish Alignment: Price action is consistently trading **above** its **short**-to-**medium**-term **moving averages** (MA5 through MA100), validating strong upward pacing.
Structural Support: The long-term EMA200 remains in a Buy position, confirming that Techcombank's structural **bull run** is highly intact.
Buy on Dips: Any short-term price pullbacks toward the key MA clusters should be viewed as **low-risk entry points** to accumulate shares.

Pivot points

Pivot: Multiple mathematical frameworks converge on a key psychological **pivot axis** centered around the **34,200** VND level.
Upside: A **breakout** above VND 34,200 opens the door to these **near-term resistance** targets.
Downside: Strong **support** in around 33,000-33,500 range limits further downside risk.

→ **Limited downside, clear upside path — consistent with our BUY recommendation.**

RISK ANALYSIS

Macro risk

MR1: Escalating **global trade tensions** could weigh on Vietnam's export growth and GDP, dampening credit demand.

MR2: **Exchange rate volatility** and global **interest rate uncertainty** put upward pressure on funding costs.

→ **Diversify loan portfolio across sectors, prioritizing domestically-driven industries less exposed to external shocks.**

Industry risk

IR1: **Regulatory changes** (Basel III, IFRS 9, removal of credit room) require adjustments to business models.

IR2: **Intense competition** for deposits due to high LDR within the banking sector, creating persistent NIM pressure.

→ **Leverage TCB's leading CASA ratio as a competitive moat; proactively prepare for upcoming regulatory requirements ahead of deadlines**

Company risk

CR1: **Real estate loan** exposure leaves NPL vulnerable if property market crashes.

CR2: **Corporate bond holdings** and **underwriting** exposes fee income and wealth management to regulatory and liquidity tightening.

CR3: High **CASA dependence** exposes funding costs to deposit migration during macro volatility.

→ **Shift corporate real estate exposure toward high-yield retail loan book; diversify into non-interest income.**

Risk matrix
